REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March, 1885.
(1883.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of births, marriages, and deaths that were registered in England and Wales in the year 1883, together with a report on the main features of the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were respectively 890,722 and 522,997, so that the natural increment of the population, or excess of births over deaths, was 367,725, and equal to 1·38 per cent. of the estimated population at the beginning of the year. The natural increment was somewhat lower than in the preceding year, when it was 372,360. This falling off was not due to an increase in mortality, for the death-rate fell slightly in 1883, but to a decline in the birth-rate, which was 33·7 in 1882, but fell to 33·3 in 1883. The population of England and Wales, as enumerated in April 1881, numbered 25,974,439 persons. The excess of births over deaths registered between that enumeration and the middle of 1883 was 857,139; so that the population at the later date, if its growth were determined simply by the balance between births and deaths, would have been 26,831,578. But in this country there is always a loss of population, owing to emigration being in excess of immigration; so that the number just given requires reduction. Unfortunately it is impossible to say with any precision how great that reduction should be; for, though the number of emigrants of English and Welsh origin is approximately known from the annual returns made by the Board of Trade, there is no similar information as to the immigrants into that division of the United Kingdom. The number of emigrants of English origin in 1881, 1882, 1883 was vastly in excess of the average (see Tables 67, 68); this increased emigration may possibly have been counterbalanced by increased immigration, but as to this, as already stated, there are no trustworthy data to guide us.

Under these circumstances, it is best to estimate the population by the usual method, namely, by assuming that the rate of growth which existed in the last intercensal period has been maintained in the years that have since elapsed. On this hypothesis the population of England and Wales in the middle of 1883, consisted of 26,770,744 persons, of whom 13,027,407 were males, and 13,743,337 were females. This is the population on which the rates in this report have been calculated.

MARRIAGES.

The marriages registered in 1883 numbered 206,384, giving a rate of 15·4 persons married to 1000 persons living.

This was practically the same rate as that recorded in 1882, which was 15·5. Thus the partial recovery in the marriage rate which began in 1880, from the depression that set in in 1874, was nearly maintained. In the following Table means are given for comparing the fluctuations in the marriage-rate with other accepted measures of public well-being; and it will be noted that again, as in most recent years, the marriage-rate has varied in the same direction as the value of British Exports, and as the average price of wheat. That is to say, all three showed a decline in 1883. A similar decline took place in the amount, per head of population, cleared at the Bankers' Clearing House.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the Bankers' Clearing House, in each of the 23 Years 1860–83.*

1883	15·4	6 14 8	11 19 9	20 11 3	41 7	221

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are also derived from the Board of Trade Statistical Abstracts.

The year of greatest *depression* in the marriage-rate was 1879. If the rates in that year in the several counties (Table 9) be compared with the rates in 1883, it will be seen that the only counties in which there was no recovery from the depression were Surrey (extra-metropolitan), Sussex, Berkshire, Huntingdonshire, Suffolk, Gloucestershire, Rutlandshire, and North

Wales; and that there was a similar absence of recovery in London, where the rate in 1883 was lower than any previously recorded. On the other hand, the counties in which there was the greatest recovery were Buckinghamshire, Bedfordshire, Cornwall, Shropshire, Staffordshire, Nottinghamshire, the North Riding, Durham, Northumberland, Westmorland, Monmouthshire, and South Wales. Thus, with the exception of London, the parts which showed no recovery were all rural; while, excepting Buckinghamshire and Bedfordshire, the counties which showed the greatest recovery were those in which mining is carried on, where, however, it must be remembered that the depression had been far greater than in the rural counties. The rates in the previous year, 1882, had showed much the same contrast between the agricultural and the industrial counties.

Forms of Marriage.—Of the 206,384 marriages celebrated in 1883, 147,000, or 71·2 per cent. were solemnised according to the rites of the Established Church, and 59,384, or 28·8 per cent., otherwise. In 1841, with which year the Table showing these proportions (Table 5) begins, 93·4 per cent of all marriages were solemnised according to the rites of the Established Church; but from that date, with scarcely a single break, the proportion has fallen, year by year, till it reached the present and lowest figure. The following Table shows what proportion of the marriages in the Established Church were by licence, banns, and Superintendent Registrar's certificate, respectively. The figures show a further decrease in the proportion of marriages by licence, and a further increase in the proportion of those by banns, has been rising continuously since 1856–60.

TABLE B. — OF the MARRIAGES SOLEMNISED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–83.

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 482 of the marriages in 1883 the particulars required for the accurate construction of the above Table were not furnished, owing to the negligence of the officiating clergyman. The cases in which there was similar neglect in the preceding year 1882 were 469 in number.

Of the 59,384 marriages, not according to the rites of the Established Church, 8980 were solemnised in Roman Catholic places of worship, showing a decline of 2·8 per cent. from the number in the previous year; 58 were marriages according to Quaker rites; 23,260 were solemnised in the chapels of other Christian communities; 539 were marriages of Jews; and 26,547 were civil marriages in the offices of the Superintendent Registrars. These latter marriages were more numerous than in any previous year; as also were the marriages of Jews, and the marriages in the chapels of dissenting Christian communities (*see* Tables 4 and 5).

First Marriages; Re-marriages. Males.—Of the 206,384 men who married in 1833, 180,830, or 87·6 per cent., were bachelors,* while 25,554, or 12·4 per cent., were widowers.

Of the 180,830 bachelors, 172,430, or 95·4 per cent., married spinsters, while 8400, or 4·6 per cent., married widows.

Of the 25,554 widowers who re-married, 15,508, or 60·7 per cent., married spinsters, while 10,046, or 39·3 per cent., married widows.

Females.—Of the 206,384 women who married in 1833, 187,938, or 91·1 per cent., were spinsters,* while 18,446, or 8·9 per cent., were widows.

Of the 187,938 spinsters, 172,430, or 91·7 per cent., married bachelors, while 15,508 or 8·3 per cent., married widowers.

Of the 18,446 widows who re-married, 8400, or 45·5 per cent., married bachelors, while 10,046, or 54·5 per cent., married widowers.

The decline in the marriage-rate of recent years has, as might be anticipated, affected the re-marriages considerably more than the marriages of bachelors and spinsters; and it will be seen in Table 6 that, notwithstanding the growth of population, the absolute number of marriages of widowers, and, with one trifling exception, of widows, was smaller in each of the years 1879–1883 than in any one of the years 1871–1878.

Marriages of Divorced Persons.—The number of persons married in the year who were described as divorced was 122, and consisted of 63 men and 59 women. Of the 63 men, 53 married spinsters, 8 married widows, and 2 married divorced women. Of the 59 women, 42 married bachelors, 15 married widowers, and 2 married divorced men.

Ages at Marriage.—In 29,582, or 14·3 per cent., of the marriages, the officiating minister or the registrar neglected to insert in the register the age of one or of both of the parties. The mean age at marriage of the remaining 176,802 couples, whose ages were duly stated, were 27·9 years for the males and 25·7 for the females. The mean age of the bachelors was 25·9 and of the spinsters 24·4 years; the mean age of the widowers was 43·4 and of the widows 39·7 years. These mean ages tally almost exactly with those recorded in previous years. Such slight differences, however, as are presented by the figures in the following table indicate a tendency in recent years on the part of men to defer marriage till a later age than was formerly the case.

* The 63 divorced men who remarried in the year are here reckoned as bachelors, and the 59 divorced women who re-married are reckoned as spinsters.

TABLE C.—MEAN AGES AT MARRIAGE.

YEAR.	Bachelors.	Widowers.	Bachelors and Widowers.	Spinsters.	Widows.	Spinsters and Widows.
1867	25·8	—	28·0	24·5	—	25·8

1882	25·9	43·3	27·9	24·4	39·8	25·6
1883	25·9	43·4	27·9	24·4	39·7	25·7

The English are a people much given to matrimony. Not only is their average annual marriage-rate higher than those of all other European countries, of which statistics are given in Table 70 (p. cl.), with the exceptions of the German and the Austro-Hungarian Empires, but they also marry at an earlier age than is the case in any other European country excepting Russia. In Russia a very large proportion of the marriages are between boys and girls under 20 years of age; and it is stated that no less than from 60 to 70 per cent. of the conscripts, who cannot be over 21 years of age, are already married when they come to be enrolled into the army. The explanation given of this strange anomaly by M. Pietro Semenow, is that in Russia the population contains an enormous proportion of small agriculturists, who are in the habit of marrying their sons at as early an age as possible (the legal age being 18 for males) in order to secure an additional female labourer. Putting aside this exceptional case of Russia, it will be seen from the following Table*, that in no other country of which the statistics are given, is the proportion of either males or females who were under 25 at the time of marriage so high as in England. Very young brides, brides that is to say under 20 years of age, are proportionately more common in France; but with this exception, and of course that of Russia, the figures for England in each of the first two columns, both for males and females, are higher than that for any other country.

* This Table is based on figures taken from the Confronti Internazionali, prepared by Signor Bodio, and published by the Italian Government (Rome 1884). As to Russian Marriages, see Conf. Intern. p. clviii., and Wallace's Russia i. 138.

Marriages of Minors.—The numbers of boys and girls under 21 years of age who married in 1883 were 15,322 and 44,963 respectively; so that of every 100 males who married 7·42, and of every 100 females who married 21·79 were under age. The percentage of these premature marriages showed a slight decline from that in 1882; but the proportions among both males and females were, with the exception of those in the year 1882, higher than in any year since 1877. The prudential considerations which have lowered the general marriage-rate, and especially have diminished the number of re-marriages, appear to have had less influence upon those who have not yet reached the age of legal independence.

Signature in Marriage Register.—Of the males who married in the year, 12·6 per cent. were unable to sign their names, while the percentage of similarly illiterate brides was 15·5. These percentages were both considerably lower than any previously recorded, and testify to a satisfactory progress in elementary education. How great that progress has been, and how much greater it has been in the last decennium than in earlier periods, is shown in the following short Table, which gives the percentages of illiterate marriages at intervals of ten years, going back from 1883, and further shows in the last two columns the rate of decrease in each successive decennium.

TABLE E.—DECLINE IN ILLITERATE MARRIAGES.

Date.	Signature by Mark, per 100 Marriages.		Decrease per cent. of Signatures by Mark in each decennium.	
	Males.	Females.	Males.	Females.
1843	32·7	49·0	7·0	10·4
1853	30·4	43·9		
1863	23·8	33·1		
1873	18·8	25·4		
1883	12·6	15·5		
			21·7	24·6
			21·0	23·3
			33·0	39·0

It will be seen that the progress in the diffusion of elementary education, as measured by the ability to sign the name in writing, was very much greater in the last decennium, than in any of the three preceding periods; the proportion of illiterate bridegrooms having fallen 33 per cent. in the course of the last ten years, and the proportion of illiterate brides having fallen no less than 39 per cent. In the course of the entire period of 40 years the proportion of illiterate males decreased by 61·5, and the proportion of illiterate females by 68·4 per cent.

The registration counties in which there were the *highest* proportions of illiterate men in 1883 were, beginning with the worst, Monmouthshire, Staffordshire, Suffolk, Norfolk, and Cambridgeshire, in all of which the proportion was over 20·0 per cent. The registration counties in which there were the *lowest* proportions, beginning with the best, were Westmorland, London, Surrey (extra-metropolitan), Middlesex (extra-metropolitan), Hampshire, and Northumberland, in all of which the proportion of illiterate men was under 9·0 per cent.

The registration counties in which there were the *highest* proportions of illiterate women, beginning with the worst, were South Wales, Staffordshire, Monmouthshire, North Wales, Durham, Lancashire, and Bedfordshire, in all of which the proportion exceeded 22·0 per cent. The registration counties in which the proportions were *lowest*, beginning with the best, were Surrey (extra-metropolitan), Sussex, Westmorland, Hampshire, Middlesex (extra-metropolitan), Rutlandshire, and Berkshire, in all of which the proportion of illiterate women was under 7·0 per cent.

Taking the whole country in the aggregate, the proportion of illiterate women is considerably higher than the proportion of illiterate men; but there are wide differences between the counties in this respect. The general rule (*see* Table 10) is that in the metropolitan and in the agricultural counties the women are more educated than the men; whereas in the mining and industrial counties the reverse is the case, the men being more educated than the women.

Speaking generally, and of both sexes, elementary education appears to be most generally diffused in the little county of Westmorland, and after this in London and the adjoining counties of the South-Eastern division, Devonshire in the South-Western division also holding a high position; while the parts that show the greatest deficiency are Monmouthshire and Wales, Staffordshire, and Bedfordshire (*see* Table 10).

Certified Places of Worship.—The number of places of worship (not belonging to the Established Church) on 31st December 1883, certified under Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, was 22,793. There were 815 new buildings registered during the year, while 92 were removed from the register by cancellation; the net increase during the year was therefore 723.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1883, was 9170 (*see* Table 11), showing an increase of 165 during the year.

BIRTHS.

The births registered in the year numbered 890,722, and were in the proportion of 33·3 per 1000 persons living.

The birth-rate was at its maximum (36·4) in 1876, and declined continuously from that date, till it reached, as already stated, 33·3 in 1883, this being the lowest rate recorded since 1853, when it was exactly the same (*see* Table 2).

The lowest birth-rates were 26·6 in Herefordshire, 28·2 in Shropshire and in North Wales, 28·8 in Dorsetshire, 29·0 in Devonshire, 29·1 in Huntingdonshire, and 29·3 in Sussex and in Cornwall; while the highest were 39·0 in Durham, 37·9 in Nottinghamshire, 37·8 in Staffordshire, 35·8 in Monmouthshire, and 35·1 in Lancashire; the lowest rates, as usual, being in the agricultural, and the highest in the mining and industrial districts.

Sex.—The male births numbered 453,076, and the female births 437,646, so that the former were to the latter in the proportion of 103·5 to 100 (*see* Table 16). This is the lowest proportion as yet registered in this country, and corroborates the statement made in a previous report (43rd Ann. Rep., p. xvi), that for some reason, as yet unexplained, the proportion of male to female births in England and Wales has been gradually declining,

Illegitimate Births.—The illegitimate births registered in the year amounted to 42,646, equal to a rate of 1·6 infants born out of wedlock to 1000 persons living. The rate had been precisely the same in the preceding year 1882, and was lower than in any other year since civil registration began. From 1851 to 1865 the illegitimate birth-rate was invariably either 2·2 or 2·3 per 1000 persons, but from that date it fell continuously though slowly until it reached, as before said, 1·6 (*see* Table 13). How constant are the differences between one county and another as regards the prevalence of illegitimacy may be seen in Table 15, which shows the proportion of illegitimate births to total births in each county in 1883 and also in the previous ten years.

Taking the whole of England and Wales, and neglecting decimals, one child out of twenty is born out of wedlock.

DEATHS.

The deaths registered in the year numbered 522,997, and were in the proportion of 19·5 to 1000 persons living. In 1881 the rate had been 18·9, but with this single exception the rate in 1883 was the lowest as yet recorded. It is a notable fact, as testifying to the progress of sanitary improvement, that the death-rates in the first three years of the present decennium were the three lowest on record; and not only so, but that the death-rates in the five preceding years, 1876–80, were also one and all far below the average.

The general death-rate is affected more or less materially by the age and sex distribution of the population; the rate being higher, *ceteris paribus*, when the population contains a larger proportion of young children and of aged persons, and also when it contains a larger proportion of males. These proportions vary in the populations of different places, and to some extent in the population of the same place when taken at considerable intervals of time. It is always preferable, therefore, to base any comparisons of mortality, not upon the general death-rate, but upon the rates at each successive age-period, and in each sex. Tables 21, 22, and 23, give the means for doing this for England and Wales; and it will be seen in Table 23 that the low general death-rate of the three years 1881–83 was mainly due to diminished mortality in the earlier age-periods. The death-rate of females was, it is true, below the average at each separate age-period, save one, when it corresponded with the average; but while the death-rate of males at each age-period up to 45, and over 75 years of age, was below the average, the death-rates of this sex in the intervening stages of life, 45–75 years of age, were above the average.

If we take the death-rates at successive age-periods in each sex, as given in Table 23, and apply these rates to a population in which the age and sex distribution remains constant—and for this purpose it will be most convenient to adopt the distribution* at the time of the last Census—we can obtain general death-rates corrected for differences of age and sex distribution. The changes in distribution have been so small in this country, that the recorded death-rates are found to undergo little alteration

* The age and sex distribution of the English population in 1881 was as follows, per 1000 persons :—

—	All Ages.	Under 5.	5—	10—	15—	20—	25—	35—	45—	55—	65—	75 and upwards.
Persons -	1000	135	121	108	98	90	145	114	84	59	33	13
Males -	487	67	60	54	49	43	70	55	40	28	15	6
Females -	513	68	61	54	49	47	75	59	44	31	18	7

by such correction. The following Table shows both the recorded and the corrected rates.

TABLE F.—MEAN ANNUAL DEATH RATES.

Years.	Recorded Death-rate.	Corrected Death-rate.
1838-40	22·33	22·65
1841-45	21·38	21·61
1846-50	23·32	23·41
1851-55	22·66	22·75
1856-60	21·80	21·77
1861-65	22·58	22·46
1866-70	22·42	22·25
1871-75	21·96	21·87
1876-80	20·82	20·71
1881	18·88	18·88
1882	19·56	19·57
1883	19·54	19·54

Infant mortality.—The deaths of infants in the first year of life numbered 122,226, and were in the proportion of 137 deaths to 1000 live-born children, the proportion in the immediately preceding ten years having been 145. (*See Table 26.*)

Only on three occasions, since civil registration began had a smaller infantile death-rate been recorded in this country than in 1883, those three exceptional years (*see Table 31*) being 1877, 1879, and 1881.

The infantile death-rate was, as usual, lowest in Wiltshire and Dorsetshire; and was also very low in Rutlandshire, Berkshire, Oxfordshire, Surrey (extra-metropolitan), Westmorland, and Sussex, in none of which was it above 105; while it was, also as usual, highest in the counties of Nottingham, Stafford, Leicester, Lancaster, and the East Riding, in each of which it exceeded 150.

Centenarians.—Of the 522,997 persons who died in the year, 63 were stated to have completed a century of life; 13 of these reputed centenarians being males and 50 being females. Of these 63 deaths, 48 were attributed simply to old age or exhaustion, 7 to bronchitis, 2 to heart affections, 2 to gangrene, one to palsy, one to intestinal obstruction, one to diarrhœa, and one to cancer.

Sex.—Of the deaths registered in the year, 269,262 were of males and 253,735 were of females, giving a male death-rate of 20·67, and a female death-rate of 18·46 per 1000; the mean annual rates in the preceding decennium having been 22·2 and 19·6 respectively. The male death-rate was therefore 6·8 per cent., and the female death-rate 5·6 per cent., below the preceding decennial averages. Out of equal numbers living in each sex there died 1120 males to 1000 females. The proportion in the preceding ten years had been 1129 male deaths to 1000 female deaths.

Urban and Rural Mortality.—The death-rate in the urban population, that is to say, in those districts and sub-districts that comprise the chief towns, and that have between them some fifteen and a half millions of inhabitants, was 20·8 per 1000, while the death-rate in the remaining and comparatively rural parts of England and Wales, with ten and a half millions of inhabitants, was 17·7 per 1000 (*see Tables 45 and 46*). This urban rate was 7·6, and this rural rate was 4·8 per cent., below the average rates in the preceding ten years.

The difference as regards healthiness between town and country is considerably greater than would be inferred simply from the difference in their death-rates; for, as was explained in my last Annual Report, the population of towns contains a much larger proportion of females, and of

adults of both sexes in the prime of life, and a much smaller proportion of very aged persons, than does the population of the more rural parts; with equal death-rates at each age-period in each sex, that is with equal healthiness, the general death-rate in the aggregate urban sanitary districts should be 10·6 per cent. lower than the general death-rate in the aggregate rural sanitary districts, whereas the urban rate, as given above, in 1883 was 17·5 per cent. higher than the rural rate.

The aggregate urban sanitary districts are, it is true, not quite identical with the districts taken above to represent the urban population; but for our present and for practical purposes they may be considered to be the same thing; and assuming this, the urban rate in 1883, after due approximate correction for differences of age and sex distribution, was more than 31 per cent. higher than the rural rate; and not merely 17·5 per cent., which is the difference between the two recorded, or uncorrected, rates.

REGISTERED CAUSES OF DEATHS.

The assigned causes of death were distributed in the several classes as follows:—

TABLE G.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1883.	Rate per Million living.			
		1883.	1882.	1881.	Mean 1871-80.
Zymotic diseases - - -	70,644	2,639	3,088	2,660	3,727
Parasitic diseases - - -	1,039	39	37	39	57
Dietetic diseases - - -	1,763	66	68	65	63
Constitutional diseases - -	91,203	3,407	3,395	3,328	3,597
Developmental diseases - -	43,710	1,632	1,558	1,583	1,676
Local diseases - - -	264,757	9,890	9,591	9,348	9,928
Violence - - -	18,053	675	669	697	737
Ill-defined and not specified causes -	31,828	1,188	1,154	1,160	1,611
All causes - - -	522,997	19,536	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of diseases were 70,664, being in the proportion of 2639 to a million persons living, a proportion which, as shown in Table G., was lower than that in either of the two preceding years, and no less than 29·2 per cent. lower than the mean annual proportion in the decennium, 1871-80.

The deaths from *small-pox* were (*see* Table 28) in the proportion of 36 per million living; on three occasions, viz. in 1875, 1879, and 1880, the mortality had been lower than this; but these were the only years since civil registration began (*see* Table 31) in which the small-pox mortality was so low as in 1883. For the four years 1843-6 the causes of death have not been abstracted.

In addition to the 957 deaths ascribed to small-pox, 99 were registered as due to *chicken-pox*. Varicella, however, or chicken-pox is usually so trifling an ailment, and so rarely if ever fatal, that it may be assumed with much probability that the greater part of the hundred or so deaths that year after year are referred to this cause are in reality

cases of small-pox. It would, therefore, probably be better, were the deaths ascribed to varicella taken into account in calculating the small-pox mortality. This would raise the small-pox death-rate to 39 instead of 36 per million living; but the mortality, even when thus raised, is still lower than in any previous year, save the three before mentioned.

In by far the largest number of the small-pox deaths, viz. in 717 out of the 957, no adequate information was given as to whether the deceased had or had not been previously vaccinated. It is much to be regretted that medical men in the country should not take pains to ascertain this fact, and to state it fearlessly in their certificates. When an outbreak of small-pox occurs in London, so large a proportion of the deaths take place in hospitals, that information as to vaccination is forthcoming in about two thirds of the total number of deaths; but in outbreaks outside London, where hospital accommodation is not furnished to an equal extent, the private medical attendant is apparently unwilling to state facts which might be disagreeable to the relatives of the deceased; and, consequently, information that would be of great value is very generally withheld. Out of the 240 fatal cases in which alone the necessary information was given, 162 or 67 per cent., were of unvaccinated, and 78 or 33 per cent., were of vaccinated persons. Assuming a similar proportion among the not-stated cases, and assuming the ordinarily received estimate to be correct, that only one out of twenty persons on the average is unvaccinated, there were in 1883, for equal numbers living, more than 39 deaths among the unvaccinated to one death among the vaccinated.

On the other side of the account have to be placed the deaths ascribed, rightly or erroneously, to "cow-pox and other effects of vaccination." These amounted in all to 55 in the course of 1883. In 1881 and 1882 they had been respectively 58 and 65; making a total of 178 deaths in the three years. In that period the number of vaccinations amounted to about two and a half millions; so that the deaths ascribed to this process were less than 71 to a million vaccinations.

If the 55 deaths ascribed to vaccination be added, as may fairly be claimed, to the deaths from small-pox of vaccinated persons, the deaths of the unvaccinated to the deaths of the vaccinated, out of equal numbers living, are reduced from the proportion of 39 to one, to the proportion of 34 to one.

The deaths from *measles* were in the proportion of 348 per million living. The proportion had been lower than this in ten of the forty-one preceding years, for which we have records, but in 1883 it was nevertheless considerably below the average.

Still more satisfactory was the death-rate from *scarlet-fever*. The deaths caused by this disease were 472 per million living; a proportion not only far below the average, but lower than that in any preceding year, with the exception of 1838 and 1861.

Less favourable were the returns under the heading *diphtheria*. The deaths from this disease were in the proportion of 158 per million living; and putting aside the 1858-1865 period in which this malady was exceptionally fatal, the mortality was higher than in any previous year. The returns of diphtheria, however, as has been noted in previous reports, are not so trustworthy as could be wished. The mortality registered as due to diphtheria was, as usual, higher in the female than in the male sex. For males the mortality was 152 per million living; while for females it was 163. (See Table 35.)

The mortality from *whooping-cough* was in the ratio of 391 deaths per million living, and lower than in any previous year, save 1840, when it was precisely the same. Whooping-cough resembles diphtheria in the fact that, while most zymotic ailments attack males more than females, these two diseases are more fatal among the latter. The death-rate from whooping-cough among males was 373, and among females 409 per million living. (See Table 35.)

The deaths from *enteric fever* numbered 6078, and were in the proportion of 227 per million living. The proportion was almost the same in 1882, and was slightly lower in 1881; but in no other year had it been so low as in these three successive years. Nor was this decline of mortality attributable to any confusion between enteric and simple or ill-defined forms of continued fever; for under this latter heading, as under the former, there was a similar decline. It is to be observed, that though the decline in the mortality from continued fevers has been very great and very rapid, when the recent rates are compared with those of ten and twenty years ago, very little progress has been made in the last five years, the rates during that period (1879-83) having remained almost stationary. The more glaring and general sanitary defects have apparently been dealt with, and it remains to hunt out and sweep away the less conspicuous nuisances, affecting individual households.

The deaths from *diarrhœa* and *dysentery* numbered 15,933 and were in the proportion of 595 to a million living. The proportion had been 452 in 1879, 546 in 1860, and 558 in 1881, these being the years with the lowest diarrhœal mortality; but, excepting these three years, the mortality was lower in 1883 than in any other year from 1847 inclusive. In each of the years mentioned as having low diarrhœal mortality, the mean temperature in the summer quarter was more or less below the average; and in 1883 the departure in this quarter from the average of 35 years amounted to 0°·8 Fahr. (*See Table 63.*)

Parasitic Diseases.—Most of the deaths grouped under this heading are deaths of children attributed to thrush. The reference of infantile deaths to thrush was formerly much more common than is the case at present, and consequently the mean annual death-rate from these diseases was much higher in 1871-80, than in the last few years, and was higher in 1861-70 than in 1871-80 (*see Table 29*). But since 1880, the rate has remained practically stationary. It was 39 per million in 1881, 37 in 1882, and again 39 in 1883.

Dietetic Diseases.—The mortality from this group of diseases in the aggregate has remained almost stationary for many years. It was 63 per million annually in 1871-80, and in the three years after that decennium was successively 66, 68, and 66 (*see Table 29*); but when the diseases included in this group are considered separately, it is found that under the heading *intemperance* there has been a slight increase; an increase, however, which, as was stated in my last Annual Report, is almost certainly attributable simply to more conscientious statement of cause, and not to any real increase of intemperance in the country. For not only do the returns of the Board of Trade show a large diminution in the consumption of intoxicating drinks, and the Census Returns show a large falling off in the number of persons engaged in the liquor trades, but our own mortality returns supply one strong piece of evidence that tells in the same direction. That evidence is as follows. The organ upon which alcoholic excess falls with the greatest weight is the liver; and it is found that in those trades in which there is notoriously habitual excess, as for instance among publicans, the mortality from liver diseases is enormously high. The fluctuations in the mortality from these diseases furnish, therefore, a useful measure of the comparative prevalence of intemperance; and the more so, inasmuch as medical men who might hesitate to give alcoholism in their certificate as the cause of death, for fear of offending surviving relatives, would have no similar hesitation in referring a death to hepatic disease. Now it will be seen, on referring to Table 28, that the mortality from liver diseases, including ascites, has been declining for some years, and was lower in 1881, 1882, and 1883 than in any other years in the Table, which goes back to 1860.

Constitutional Diseases.—The aggregate mortality from the various diseases included in this group was 3407 per million; a mortality considerably below the annual mean in 1871-80, but not very different from the mortality of either 1881 or 1882. Limiting ourselves to the three years that have elapsed since the close of the last decennium, it will be seen (Table 29) that the mortality from *rheumatic fever* and *rheumatism* as also from *phthisis* and *other tubercular or scrofulous affections*, remained practically at the same point; while under the heading *cancer* there was a progressive increase; this increase, it is true, was not great—the mortality per million being 520, 532, and 546, successively—but was of importance, as being a continuation of the steady increase that had been going on year after year for a long period. In the decennium 1851-60 the deaths attributed to cancer or malignant disease were 317 annually per million persons living; in the next decennium 1861-70, the mortality had risen to 386; in 1871-80 it had further advanced to 471; while in 1881-83 it reached a mean of 533. How much, if any, of this increase was real cannot be stated with any certainty; but that some part of the apparent increase was only apparent, and due to improved diagnosis and more careful statement of cause can, as we stated in previous reports, scarcely be doubted. Year by year the number of deaths ascribed to “abdominal disease” and other imperfectly stated causes has been undergoing diminution, and there has been of course a corresponding addition to the mortality under the more definite headings. Moreover, the increase of mortality from cancer has been considerably greater in the male than in the female sex. Now, were the rise not only apparent but real, there would seem to be no reason why males should have suffered more than females; whereas the difference is readily intelligible on the hypothesis that the rise was, at any rate in great measure, merely due to improved diagnosis. For the cancerous affections of males are in much larger proportion internal or inaccessible than are those of females, and consequently are more difficult of recognition, so that any improvement in medical diagnosis would add more to the male than to the female figures.

The mortality from *diabetes* was 51 per million living, a higher proportion than any previously recorded. As has been stated in previous reports it is probable that the apparent increase which for years has been going on in the mortality under this heading has been due to improved certification. It has been objected to this explanation that advanced diabetes is so marked a disease that an erroneous diagnosis of a fatal case is almost impossible. This doubtlessly is true; but it is also true that medical men, even when they have correctly diagnosed a disease, very frequently omit, from indolence or carelessness, to state that cause in their certificates, and it is to their happily increasing carefulness in this matter that I am inclined to attribute the apparent increase of diabetes. It cannot of course be positively asserted that there has been no real increase of this disease; there are no data to enable any one to decide absolutely whether this has or has not been the case. All that is here stated is that the apparent increase has not been by any means necessarily a real increase; and that there has been, and still is, another cause, namely increasing care in the statement of cause, to which very possibly the apparent rise may be attributable. It has been further suggested that the increase of diabetes has not only been a real increase, but has been due to the increasing mental strain and worry of modern life; and a similar explanation has been suggested for the apparent increase of mortality from some other diseases, namely, from rheumatic fever and rheumatism, and from certain renal affections.* It may be well, therefore, to point out, that the increase under these headings has been fully as great among children

* See Dr. Crichton Browne's Report to the Education Department upon the alleged Over-pressure of Work in Public Elementary Schools, 1884.

under five years of age, as among either children of school age or adults.

Developmental Diseases.—The mortality attributed simply to *old age*, which had been falling for many years, in consequence of more careful statement of causes of death, rose again, and not inconsiderably, in 1883; and this although the temperature of the March and December quarters, by which the mortality of aged persons is especially influenced, had not by any means been unfavourable. A possible explanation of this increase will be suggested when we come to deal with local diseases.

The deaths from *premature birth* also rose in 1883 (see Tables 28 and 29), as they had been doing with some fluctuations in many previous years. As was pointed out in my last Annual Report it is not impossible that this progressive rise may be connected with the marked increase in the employment of women in industrial occupations.

Local Diseases.—Among the several groups of diseases included in this large class, there were several that showed in 1883 a more or less considerable increase of mortality. This was notably the case with *diseases of the nervous system*, exclusive of convulsions, with *diseases of the organs of circulation*, and with *diseases of the urinary system*. The increase in these several groups of diseases was the more noticeable, inasmuch as during the three immediately preceding years, 1880–1–2, there had been an apparent arrest in the almost continuous rise that had been going on for many previous years (see Table 28). The mortality from urinary diseases reached 446 per million living, and was at its maximum point; the mortality from nervous diseases, excluding convulsions, was in the proportion of 1855 deaths per million living, a proportion which had never been equalled except in 1875 and 1879; while the mortality from diseases of the circulatory system was at the rate of 1465 per million, and higher than in any year excepting 1879. The year 1883 was for some reason or other unfavourable to aged persons; though the mortality at the earlier age-periods fell, the mortality at the more advanced ages rose (see Tables 21 and 22), and so of course did the mortality referred to those diseases to which later life is especially liable. What was the peculiarity in the year that made it so unfavourable to the more advanced ages of life is not apparent; it was not seemingly the usual enemy of the aged, prolonged periods of cold, for the mean temperature of the March quarter, as previously pointed out, was not below the average, and the mean temperature of the December quarter was 10.3 Fahrenheit above the average for 112 years (see Table 65). Moreover the mortality from *diseases of the respiratory system*, which is especially influenced by cold weather, though somewhat higher than in either 1881 or 1882, was not above the average; the deaths due to these diseases were 3656 per million living, but they had averaged 3687 in 1871–75, and 3800 in 1876–80 (see Table 29).

Possibly the explanation of the high mortality of persons of more advanced life in 1883 is to be found in the low mortality among them in the three preceding years, owing to which there had been an accumulation of weak lives, ready to drop off from comparatively slight causes.

The mortality under the heading *convulsions* again fell, as it had generally done in recent years, in consequence of improved statement of causes, and was in 1883 at the lowest point yet attained. The same was the case with *diseases of the liver* and *ascites*, giving, as was previously mentioned, good evidence of a diminution of intemperance.

The mortality from *childbirth* and from *puerperal fever* is best measured by the proportion of mothers who die from these causes to the infants born in the course of the year. The proportion was 5.1 deaths of mothers to

1000 infants born alive. The proportion had been precisely the same in 1882, and in 1881 had been 4·8 (*see* Table 41), these being the only two years with which strict comparison can be made, inasmuch as the system introduced in 1881 of applying for further information in respect of deaths ascribed simply to peritonitis has added materially to the puerperal returns. The puerperal mortality varies much in different parts of the country (*see* Table 42). It is especially high in North Wales; and apparently, as a general though not universal rule, higher in mining and industrial than in purely agricultural counties. What are the conditions of female life that determine these differences, is a question that deserves investigation.

Violent Deaths.—The total number of deaths ascribed to some or other kind of violence was 18,053, being in the proportion of 67·5 to a million persons living. This proportion differed but slightly from that recorded in each of the four preceding years, 1879–1882; but was very considerably lower than the proportion in any earlier year (*see* Tables 28 and 29). The decline was mainly in the deaths attributed to accident or negligence, which form the great bulk of the violent deaths. Though there was also a slight fall in the mortality from murder and homicide, these deaths are inconsiderable in number; while the mortality from suicide, though fractionally lower than that in the four immediately preceding years, was nevertheless high, the tendency to suicide having increased of late years, and the highest figures under this heading (*see* Table 28) being those of the five years 1879–1883.

The mortality from violence differs very greatly in different parts of the country, these differences being determined in some degree by the age and sex distribution of the population, but mainly by the nature of its occupations. The annual death-rate of males from violence is, taking an average of the ten years 1871-80, 1116 per 10,000, while that of females is only 369. Consequently a large proportion of females in the population, as in Bedfordshire, tends to bring down the rate. Again, nearly a third part of the deaths from violence occur among children under ten years of age, and consequently the rate of mortality from violence is affected by the proportion of such children in the population. The differences, however, produced by these conditions of age and sex distribution are insignificant, as compared with those due to diversities of occupation. Of all industries the one most exposed to risk of fatal accident is mining; after which come the occupations of quarrymen and of fishermen. These latter, however, do not form a sufficient portion of the total population of any county to produce any material difference in the aggregate death-rate from violence. Consequently it is found practically that the death-rate from violence is notably above the average in those counties only where a large proportion of the inhabitants is engaged in mining. This is conspicuous in the preceding table which gives the mean annual mortality from violence per 10,000 living in the several registration counties, in the three years 1881-82-83.

Ill-defined and non-specified Causes.—In 31,828 of the deaths, or 6.1 per cent. of the whole number, the cause of death was not stated with sufficient completeness to enable the death to be properly classified. The great bulk of these unsatisfactorily returned deaths were ascribed to debility, atrophy, or inanition, without further specification; but 1,848 were ascribed to dropsy, and may have been due either to renal, hepatic, cardiac, or other diseases; 357 were simply described as caused by tumour, 418 simply as sudden deaths, and so on. The exigencies of office-work render it impossible to make further inquiries as to all these numerous deaths; but, so far as was possible, the system instituted in 1881 was continued, and 1179 letters of inquiry were sent out, which elicited in most cases such additional information as was necessary.

The Royal College of Physicians has now printed a revised edition of their Nomenclature of Diseases, and the Government has undertaken to supply a copy of it gratuitously to every registered medical practitioner in the country. Under these circumstances it is surely not unreasonable to ask that medical men shall, in stating causes of death, conform to the terminology adopted and recommended by the College. Were they to do so the process of classification of deaths in the General Register Office would be much simplified and facilitated.

Certification of the Causes of Death.—During the year 1883 the causes of 475,201 or 90.9 per cent., of the 522,997 deaths were certified by registered medical practitioners; while the causes of 28,448 or 5.4 per cent. were certified by coroners. The causes of the remaining 19,348, or 3.7 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. In the metropolis the proportion did not exceed 1.3 per cent. Excluding the extra-metropolitan parts of Middlesex and Surrey, the percentage did not exceed 0.7 in Wiltshire, 1.4 in Berkshire, and 1.7 in Buckinghamshire, while it ranged upwards to 5.7 both in Shropshire and Cumberland, 5.8 in Durham, and 6.6 in Cornwall. In Wales the proportion was 9.3 per cent.

It is satisfactory to note a further slight decline in the proportion of uncertified deaths in 1883, compared with the proportions in 1881 and 1882, which were 4.1 and 3.9 per cent. respectively.

PROGRESS OF REGISTRATION.

During the year 1883 no fewer than 1,826,487 names were added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales. At the close of the year the aggregate number of names in these indexes, which on 31st December 1883 embraced a period of $46\frac{1}{2}$ years, was 68,445,762. The total number of searches in 1883 (including those in non-parochial and other records) was 34,809, showing an increase of 1212 or 3·6 per cent. upon the number in the previous year; the number of certificates issued was 28,544, or 3·6 per cent., more than in 1882. The amount received as fees for searches and certificates in the year 1883, and paid into Her Majesty's Exchequer, was 5,356*l.* *os.* *od.* (See Table 49.)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi.-xxii. and xxv.-xxvi.

MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 181,971, and that the number of deaths was 1783; so that the rate of mortality was 9·8 per 1000, against 22·2, 17·6, 14·0, and 11·8, respectively in the four preceding years, showing a successive diminution year by year.

The average strength of the Army at home was 90,071, and the deaths were 672; while the average strength of the Army abroad was 91,900, and the deaths 1111. The death-rate at home was therefore 7·5, and the death-rate abroad 12·1 per 1000. (See Tables 53-57.)

MORTALITY IN THE NAVY.*

The total force in the Royal Navy afloat, corrected for time, in 1883 was 43,350. The deaths were 255, of which 176 were caused by disease and 79 by violence, including drowning. The death-rate from disease alone was 4·05 per 1000, and considerably lower than in the preceding year, in which it had been 6·87. The death-rate from violence was 1·82, having in the preceding year been 2·62. The total death-rate fell from 9·49 in 1882 to 5·88 in 1883.

Of the 79 deaths caused by violence, 4 were due to wounds received in action, 33 to drowning, 15 to falls from aloft, 2 to asphyxia, 6 to suicide, and 19 to various wounds and fractures, of which the cause was not stated.

The assigned causes of the 176 deaths ascribed to disease were as follow:—

Continued fevers	-	-	20	Diseases of—	
Yellow fever	-	-	4	Circulatory system	- - 17
Paroxysmal fevers	-	-	17	Respiratory system	- - 36
Cholera	-	-	9	Digestive system	- - 14
Rheumatism	-	-	4	Urinary and generative systems	- - 6
Tubercular diseases	-	-	25	All other causes	- - 8
Diseases of nervous system			16		

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1883 the entries recorded in this Register were 381 births and 4904 deaths. Of these 4904 deaths, 2304 were returned as those of persons of English origin, while 839 were indefinitely returned as those of persons of "British" origin, out of which number it is impossible to estimate the proportion belonging to England.

Among *passengers* on board merchant vessels at sea (see Table 59), 430 births and 941 deaths were reported during 1883; the deaths showed an increase of 39 per cent. upon the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 60), that the number of merchant seamen at sea in registered vessels during 1883 was 200,727. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during the first six months of 1883 were 2751, equal to an annual rate of 27·4 per 1000 of the strength, exceeding by 6·0 the average annual rate (21·4) during the 31 years 1852-82.

EUROPEAN STATES.

In Tables 70-84 will be found international vital statistics relating to thirteen of the principal European States, including England and Wales, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 70 affords the means for comparing the marriage, birth, and death rates in each State, in a series of years, with the mean rate during the period 1861-80. Tables 71-84 contain detailed statistics for each State.

The slight general recovery in the *marriage-rate* observable in the different European States in 1881 and 1882 was scarcely maintained in 1883. The rates recorded in Norway, Austria, the Netherlands, and Belgium were lower in 1883 than in 1882. The rates in 1883, per 1000 of the estimated population, ranged from 12·8 in Sweden, 13·2 in Norway, and 13·5 in Belgium, to 15·7 in Prussia, 16·0 in Italy, and 20·5 in Hungary. The mean rate in the eleven European States (furnishing returns for 1883) was 15·7, against 15·4 in England and Wales.

The *birth-rates* in most of the States showed a further decline from those in recent years; the rate in Hungary, however, again showed an increase. The greatest depression in the birth-rate, compared with the mean rates in 1861-80, occurred in the German Empire, Switzerland, and Sweden. The birth-rates in 1883 ranged from 24·8 in France, 28·4 in Switzerland, and 28·9 in Sweden, to 36·7 in the German Empire, 37·1 in Italy, 38·2 in Austria, and 45·3 in Hungary. The mean rate in eleven European States was 34·3, against 33·3 in England and Wales. The births in France exceeded the number returned in any year since 1877, when a marked decline set in; the birth-rate in 1883, however, showed no increase upon the low rate in the previous year.

The *death-rates* in 1883 showed a general decline from those returned in recent years, and excepting in Norway (where the rate was slightly above the mean) the rate in each State was considerably below the mean rate in the years 1861-80. The lowest rates in 1883 were 17·1 in Norway, 17·3 in Sweden, and 18·4 in Denmark; the rates in the other States ranged upwards to 27·5 in Italy, 30·1 in Austria, and 32·6 in Hungary. The mean death-rate in the eleven States furnishing returns was 25·7, and exceeded the rate in England and Wales by no less than 6·2 per 1000.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF THE YEAR 1883.

BY JAMES GLAISHER, ESQ., F.R.S., &c.

The most remarkable occurrences during the year were the unusual heavy storms in January, the severe gales in September on the 23rd and 25th days, and a peculiar glow of light during the greater part of the month of December which whenever the sky was clear was visible before sunrise and after sunset, and at times even through the clouds.

The following remarks with regard to the excess or deficiency of atmospheric pressure, temperature, and rainfall are primarily derived from observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The mean daily readings of the barometer were below their averages for the first 2 days in January; from the 3rd to the 8th it was above its average, the mean daily excess being 0.34 in.; from the 9th to the 16th it was below, the average deficiency for these 8 days, being 0.33 in.; then from the 17th till the 24th it was above its average (the 22nd and 23rd, being as much as 0.66 in. to 0.67 in. respectively above), and the daily excess was 0.40 in. From January 25th to February 3rd there was a deficiency of 0.38 in. daily, this was followed by 3 days above, the daily excess being 0.19 in.; from the 7th to the 14th there was a deficiency of 0.23 in. daily; from February 15th to March 6th there was a daily excess of 0.44 in.; from March 7th to the 31st there was a mean daily deficiency of 0.19 in., for the first 12 days in April the mean daily excess was 0.42 in., on April 13th the reading passed below the average, and continued so with but few exceptions till May 12th, the average daily deficiency of pressure for these 30 days being 0.15 in. From May 13th till the 24th the pressure was above the average daily by 0.21 in.; then for 2 days it was below; from May 27th to June 3rd there was an excess of 0.13 in. daily, then for 6 days there was a deficiency averaging 0.12 in. daily. From June 10th to the 14th there was an excess, of 0.24 in. daily; on the 15th the reading was below and continued so till 21st, the average deficiency being 0.07 in., the 22nd and 23rd were above by 0.04 in., from the 24th to the 28th there was a mean deficiency of 0.10 in., from June 29th to July 2nd there was a slight excess over the average. From July 3rd to the 15th the daily deficiency was 0.17 in., the 16th and 17th days were above, from the 18th to the 24th it was below its average, and the daily deficiency was 0.18 in., this was followed by 4 days above the average, the daily excess being 0.16 in.; from July 29th to the 31st the daily deficiency was 0.17 in. For the first 5 days in August the mean excess was 0.23 in., from the 6th the readings were below until the 15th, the average deficiency was 0.09 in.; for 12 days the mean excess was 0.17 in. daily; on August 28th the reading was below and continued with but slight exceptions till September 11th, then for 8 days an excess of pressure; from the 20th to October 4th there was a deficiency of 0.25 in. daily. From October 5th to the 13th the atmospheric pressure was above its average by 0.32 in. daily, then for 12 days it was below by 0.10 in. daily, from October 26th to November 3rd it was above by 0.28 in. daily. A period of 9 days of low readings followed, viz., from November 4th to the 12th, the mean amount being 0.32 in., from the 13th to the 15th the barometer readings were above their averages by 0.13 in., on the 16th and 17th they were below their daily averages by 0.16 in., from the 18th to the 21st, the pressure was in excess, averaging 0.08 in., for 5 days it was below by 0.37 in. daily, from November 27th to December 2nd it was above by 0.33 in. daily, then for 2 days a deficiency of 0.13 in.; from December

5th to the 9th it was 0·36 in. daily above the average values, from December 10th to the 16th it was 0·22 in. below, and from the 17th to end of the year the average daily excess was 0·30 in.

The highest mean daily reading in the year was 30·659 inches on February 23rd, and the lowest was 28·642 inches on September 2nd; thus giving a range of 2·017 inches.

Temperature.—The mean daily temperature of the air was above its average, with but few exceptions, from January 1st to March 5th, the average daily excess 3°·6. From March 6th to the 31st the temperature was below its average by 6°·4; from April 1st to the 8th, the average excess was 3°·8; from April 9th to the 26th it was below, the average daily deficiency being 1°·7; from April 27th to May 1st it was slightly warmer, being in excess by 1°·6 daily; from the 2nd to the 12th the weather was very cold, being 6°·1 below its mean daily average; a warmer period set in on the 13th, and continued till June 14th, the mean excess being 2°·4; for 8 days the average daily deficiency of mean temperature was 5°·2; from the 23rd to the 25th it was warmer, being 1°·9 above the average; from June 26th to the 28th it was 4°·0 below the average; from June 29th to July 4th the mean excess was 5°·3, July 5th was below by 1°·2, then for 4 days the temperature average 1°·4 then followed a cold period of 39 days, the mean deficiency being 3°·8, this was followed by 13 days of a warmer temperature, the daily excess being 2°·8, from August 31st to September 11th, the deficiency daily was 2°·8, from September 12th to the end of the month the mean daily excess was 1°·7. For the first week in October the average daily deficiency was 5°·6, the temperature was warmer from the 8th to the 17th, the excess daily being 2°·0; for 6 days ending October 23rd the defect of mean temperature averaged 2°·3 daily; the daily excess for the next 9 days being 5°·2. From November 2nd to the 17th the days were cold, the average daily deficiency of mean temperature being 1°·7; from November 18th to December 3rd the weather was warm, being 3° above the daily average, then for 6 days there was an average deficiency of 6°·1; this was followed by 5 warm days, the average daily excess being 4°·6, then 4 days of cold, and from December 19th to the end of the year the excess was 2°·3 daily. The highest mean daily reading in the year was 85°·0 on July 2nd, and the lowest was 24°·0 on March 9th, thus giving a range of 61°·0.

Rainfall.—The fall of rain in January was 1·69 in.; being 0·20 in. below the average; in February it was 2·90 ins., being 1·33 in. above the average. The fall in March was 0·78 in., in April was 1·70 in.; in May it was 1·71 in.; in June was 1·34 in.; in July 1·99 in.; in August was 0·72 in., being respectively 0·77 in., 0·06 in., 0·36 in., 0·66 in., 0·57 in., and 1·71 in. below their averages. In September the fall of rain was 3·82 ins., being 1·41 in. in excess of its average, in October was 1·59 ins., being 1·25 in. below its average; in November it was 2·84 ins., being in excess of its average by 0·50 in., and in December it was 0·83 in. being 1·17 in., below its average. The total fall of rain during the year was 21·9 ins., being 3·50 ins. below its average. The total falls of rain in the year ranged from 49·12 ins. at Bath, 47·00 ins. at Stonyhurst, and 45·08 ins. at Totnes, to 21·90 ins. at Greenwich, 22·50 ins. at Blackheath, and 23·48 ins. at Strathfield Turgiss. The greatest number of rainy days were at Burslem 240, at Salisbury 232, at Nottingham 236; and the least were at Cardington 151, at Holkham 159, and at Barnet 160.

Thunderstorms occurred on 48 days during the year, of these 10 were both in June and July, 7 in November, 6 in May, 4 in October, 3 in December, and 2 in each of January, February, August, and September.

The storms in May, June, and July were general, and those in October, November, and December were chiefly in the north.

Thunder was heard but lightning was not seen on 59 days during the year, of these 16 were in June, 12 in July, 6 in May, August, and September, 4 in February, October, and November, one in March, and none in April or December.

Lightning was seen but thunder was not heard on 32 days during the year, 10 in June, 4 in July and October, 3 in November, 2 in January, May, August, September, and December, one in March, and none in February.

Solar halos were seen on 87 days during the year, 12 in April, 10 in both May and November, 9 in June, 8 in both August and October, 7 in March, 6 in September, 5 in January and February, 4 in July, and 3 in December.

Lunar halos were seen on 43 nights during the year, 7 in January, 6 in February, 5 in both May and August, 4 in both April and October, 3 in both November and December, and 2 in March, July, and September.

Aurora Boreales were seen on 15 nights during the year, 2 at February, March, April, May, November, and December, one in August, September, October, and none in January, June, or July.

Snow fell on 75 days during the year, on 24 in March, 11 in January, 10 in December, 8 in May, 6 in October and November, 5 in February, 4 in April, one in July, and none in August or September.

Hail fell on 94 days during the year, 17 in November, 15 in March, 9 each in January, October, and December, 8 in February, 6 in both May and July, 5 in both April and June, 3 in September, 2 in August.

Fog prevailed on 158 days during the year, 19 in January, 17 in November, 16 in October, 15 in both February and September, 14 in December, 13 in June and August, 12 in April, 11 in March, 9 in May, and 4 in July.

PRELIMINARY TABLES.

(1883.)

TABLE 1.—ENGLAND.—Population, Marriages, Births, and Deaths,
1838-83.

YEARS.	Estimated POPULATION in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	338,984	153,590

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the last five Censuses. For the estimated numbers of males and females in each year, and for population estimates for years prior to 1888, see Table 66.

* Some marriages between Protestants and Roman Catholics are solemnised twice; such cases are, however, so few, that this source of error may be practically disregarded.

TABLE 5.—ENGLAND.—Of 100 **Marriages**, those solemnised according to, and not according to, the Rites of the **Established Church, 1841-83.**

YEARS.		TOTAL MARRIAGES.	ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.					NOT ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.			
			License, including Special License.	Banns.	Superintendent Registrar's Certificate.	Not stated.	TOTAL IN ESTA- BLISHED CHURCH.	TOTAL NOT IN ESTA- BLISHED CHURCH.	Roman Catholics.	Other Religious De- nominations, in- cluding Jews and Quakers.	Civil Marriages in Superintendent Re- gistrar's Office.

* Deaths from this cause prior to 1881 are included, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 are included with "Other Tubercular and Scrofulous Diseases."
‡ Deaths from Addison's disease prior to 1861 are included with "Diseases of Urinary System."

TABLE 28.—ENGLAND.—Death-rates from various Causes to a Million Persons Living, 1860-83.

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0.5, a cipher is inserted.)

* Wandsworth was not included in Registration London until 1844; Lewisham and Hampstead were not included until 1847; since that year the boundaries of Registration London have remained unchanged.

For the years 1838-50 the numbers of deaths from the various diseases are derived from summaries of 52 or 53 weeks; for years subsequent to 1850 they are derived from the Annual Reports, and relate to the calendar years.

TABLE 33.—LONDON.—Death-rates from the Principal Zymotic Diseases, and Infant Mortality, 1838-83.

PERIODS AND YEARS.	ANNUAL MORTALITY TO 1000 PERSONS LIVING, FROM THE PRINCIPAL ZYMOTIC DISEASES.										ANNUAL MORTALITY of Infants under One Year of Age to 1000 Births.
	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Typhus.	Enteric Fevrr.	Simple and Ill-defined Fevrr.	Diarrhoea and Dysentery.	Cholera.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (No. 225, 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons; the quotations for 1882 and 1883 are the means of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

Mean of the Thirty- one years 1852–82 }	187,613	4,023	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

Elements in the Year 1883. By JAMES GLAISHER, Esq., F.R.S.

Mean Monthly Elastic Force of Vapour.	Mean Weight of Vapour in a Cubic Foot of Air.	Mean additional Weight of Vapour required for Satura- tion.	Mean Degree of Humidity (Saturation=100).	Mean Weight of a Cubic Foot of Air.	Mean estimated Strength.	Wind.				Mean Amount of Cloud (0-10).	Rain.		NAMES OF STATIONS.
						Relative Proportion of					Number of Days it fell.	Amount collected.	
						N.	E.	S.	W.

TABLE 69.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1883.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
 2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1883.	
23	ST. OLAVE SOUTHWARK	1 February -	The sub-districts of <i>St. John Horsleydown</i> and <i>St. Olave Southwark</i> were united under the name of <i>St. Olave Southwark</i> (aggregate population 11,956).
25	WANDSWORTH - -	1 July -	The sub-district of <i>Battersea</i> was divided into two sub-districts, viz., <i>East Battersea</i> (population 54,675), and <i>West Battersea</i> (population 52,587).
36	REIGATE - -	1 April -	The parish of <i>Merstham</i> (population 903) was transferred from the sub-district of <i>Horley</i> to that of <i>Reigate</i> .
55	EAST ASHFORD - -	1 August -	The sub-districts of <i>Aldington</i> and <i>Brabourne</i> were united under the name of <i>Brabourne</i> (aggregate population 7,627).
75	CUCKFIELD - -	1 January -	The parishes of <i>Bolney</i> and <i>Cowfold</i> (aggregate population 1,842), were transferred from the sub-district of <i>Cuckfield</i> to that of <i>Hurstpierpoint</i> .
82	EAST PRESTON - -	1 October -	Parts of the parishes of <i>Angmering</i> and <i>Leominster</i> were transferred from the sub-district of <i>Littlehampton</i> to that of <i>Arundel</i> .
115	ABINGDON - -	1 January -	The sub-districts of <i>Cumnor</i> and <i>Fyfield</i> were united under the name of <i>Fyfield</i> (aggregate population 4,932).
162	BRIXWORTH - -	1 July -	The sub-districts of <i>Moulton</i> and <i>Brixworth</i> were united under the name of <i>Brixworth</i> (aggregate population 13,336).
191	BILLERICAY - -	1 April -	The sub-district of <i>Great Burstead</i> was dissolved. The parishes of <i>Dunton</i> , <i>Hutton</i> , <i>Little Burstead</i> , and <i>Mountnessing</i> (aggregate population 1,664) were added to <i>Brentwood</i> sub-district; and the parishes of <i>Great Burstead</i> , <i>Laindon</i> , <i>Lee Chapel</i> , <i>Ramsden-Bellhouse</i> , and <i>Ramsden-Crays</i> (aggregate population 3,047) were added to <i>Wickford</i> sub-district.
249	BRADFORD-ON-AVON -	1 January -	The parish of <i>Freshford</i> (population 615) was transferred from the sub-district of <i>Bradford South-Eastern</i> to that of <i>Tuerton</i> (517 : 1).
311	WINCANTON - -	1 July -	The parishes of <i>Buckhorn-Weston</i> and <i>Kington Magna</i> (aggregate population 982) were transferred from the sub-district of <i>Wincanton</i> to that of <i>Milborne Port</i> .
396	STRATFORD-ON-AVON -	1 March -	The sub-districts of <i>Kineton</i> and <i>Wellesbourne</i> were united under the name of <i>Wellesbourne</i> (aggregate population 5,155).
396	" "	1 June -	The parishes of <i>Charlecote</i> , <i>Fulbrook</i> , and <i>Hampton-Lucy</i> (aggregate population 754) were transferred from the sub-district of <i>Wellesbourne</i> to that of <i>Wootton-Wawen</i> ; and the parish of <i>Alveston</i> (population 963) was transferred from the sub-district of <i>Old Stratford</i> to that of <i>Wellesbourne</i> .

TABLE 69 (continued).—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1883.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1883.	
418	SLEAFORD - -	1 November	The sub-district of <i>Sleaford</i> (aggregate population 9,217) was dissolved; ten parishes (aggregate population 3,153), viz., Anwick, Ashby-de-la-Laund, Bloxholme, Digby, Dorrington, Haverholme, Holdingham, Leasingham, Roxholme, and Ruskington were added to the <i>Billinghay</i> sub-district; nine parishes (aggregate population 5,690), viz., Aunsby, Culverthorpe, Dembleby, Kelby, New Sleaford, Old Sleaford, Quarrington, Silk-Willoughby, and Swarby were added to the <i>Heckington</i> sub-district; and two parishes (aggregate population 374), viz., Brauncwell and Temple-Bruer were added to the <i>Leadenham</i> sub-district. The parish of South Kyme (population 530) was transferred from the <i>Heckington</i> sub-district to that of <i>Billinghay</i> . The name of the enlarged <i>Heckington</i> sub-district was subsequently altered to that of <i>Sleaford</i> .
434	BINGHAM - -	"	The sub-districts of <i>Bingham</i> and <i>Ratcliffe-on-Trent</i> were united under the name of <i>Bingham</i> (aggregate population 14,721).
468	ASHTON-UNDER-LYNE -	1 January	The sub-districts of <i>Dukinfield</i> and <i>Staley</i> were united under the name of <i>Dukinfield</i> (aggregate population 38,573). That part of the <i>Ashton Town</i> sub-district known as "The Stakes" was transferred to the <i>Hartshead</i> sub-district. That part of the <i>Audenshaw</i> sub-district known as "Walkmill" (population 1,270) was transferred to the <i>Ashton Town</i> sub-district.
586	CARDIFF -	"	The parish of Llanilterne (population 118) was transferred from the sub-district of <i>St. Nicholas</i> to that of <i>Whitchurch</i> .

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," changes were made on the 25th March 1883 in the constitution of the following Districts:—GUILDFORD (32), DORKING (35), STOCKBRIDGE (100), FARINGDON (114) *TOWCESTER (157), HIGHWORTH (241), ALDERBURY (254), *WILLINGTON (303), *DURSLEY (324), WESTBURY-ON-SEVERN (325), WINCHOMB (334), CHELTENHAM (335), TEWKESBURY (336), CHURCH STRETTON (346), BRIDGNORTH (348), MARKET DRAYTON (356), NEWPORT (358), *BASFORD (430), WORTLEY (507), ROTHERHAM (510), *DONCASTER (511), *SELBY (514), AUCKLAND (545), DURHAM (549), and MONMOUTH (581).

Under the provisions of "The Divided Parishes Act, 1882," changes were made on the 24th day of March 1883 in the constitution of the following Districts:—GUILDFORD (32), HAMBLEDON (34), MALLING (47), TUNBRIDGE (49), WEST ASHFORD (54), EAST ASHFORD (55), *BLEAN (58), *DOVER (64), ELHAM (65), ROMNEY MARSH (66), STEYNING (78), HORSHAM (79), *THAKEHAM (81), *EAST PRESTON (82), MIDHURST (85), *ISLE OF WIGHT (91), PETERSFIELD (104), *BASINGSTOKE (108), UXBRIDGE (125), BRENTFORD (126), BARNET (128), EDMONTON (129), BERKHAMPTSTEAD (139), AYLESBURY (143), *TOWCESTER (157), WELLINGBOROUGH (163), PETERBOROUGH (167), BEDFORD (171), LEIGHTON BUZZARD (175), *CAMBRIDGE (179), ELY (182), NORTH WITCHEFORD (183), WHITLESLEY (184), WISBECH (185), CHELMSFORD (192), MALDON (194), *COLCHESTER (196), LEXDEN (197), HALSTEAD (198), BRAINTREE (199), *DUNWOM (200), RISBRIDGE (202), SUDBURY (203), COSFORD (204), *MUTFORD (218), *ERPINGHAM (222), DOWNHAM (238), BRADFORD-ON-AVON (249), WESTBURY (250), WARMINSTER (251), AMESBURY (253), ALDERBURY (254), *WILTON (255), *TISBURY (256), *SHERBORNE (266), *St. Thomas (271), *NEWTON ABBOT (273), SOUTH MOLTON (284), BARNSTAPLE (285), TORRINGTON (286), BIDEFORD (287), WILLITON (303), TAUNTON (306), *BRIDGWATER (307), LANGPORT (308), YEovil (310), *WINCANTON (311), FROME (312), SHEPTON MALET (313), WELLS (314), CLUTTON (316), *KEYNSHAM (318), BEDMINSTER (319), BARTON REGIS (321), *CHIPPING SODBURY (322), THORNBURY (323), DURSLEY (324), WESTBURY-ON-SEVERN (325), GLOUCESTER (327), WHATENHURST (328), STROUD (329), TETBURY (330), *CIRENCESTER (331), NORTLEACH (332), STOW-ON-THE-WOLD (333), TEWKESBURY (336), ROSS (338), HEREFORD (339), BROMLEY (341), LEOMINSTER (342), LUDLOW (344), CHURCH STRETTON (346), BRIDGNORTH (348), MADELEY (350), AICHAM (351), OSWESTRY (352), ELLESMERE (353), WELLINGTON (357), STAFFORD (359), STOKES-UPON-TRENT (363), *LEEK (364), CHEADLE (365), UTTOXETER (366), LICHFIELD (369), WALSALL (372), DUDLEY (374), WORCESTER (379), UPTON-ON-SEVERN (380), PERSHORE (382), DROITWICH (383), BROMSGROVE (384), *STRATFORD-ON-AVON (396), LUTTERWORTH (400), BLABY (403), *MARKET BOSWORTH (405), LEICESTER (409), *HOLBEACH (416), SLEAFORD (418), *SPILSBY (422), *LOUTH (423), *CAISTOR (424), NEWARK (433), ASHBOURNE (438), *CHESTERFIELD (439), BAKEWELL (440), RUNCORN (446), NORTHWICH (447), *NANTWICH (449), *CHORLTON (464), *HASLINGDEN (471), *CLITHIEROE (473), *KNARESBOROUGH (489), *WETHERBY (490), HUDDERSFIELD (495), HUNSLET (498), HOLBECH (499), WORTLEY (507), *SCULCOATES (520), *GUISBROUGH (533), BÉPALE (537), LEYBURN (538), LANCASTER (548), *DURHAM (549), CHESTER-LE-STREET (552), GATESHEAD (553), *TYNEMOUTH (557), *WIGTON (573), *CHEPSTOW (580), MONMOUTH (581), *CARMARTHEN (597), NEWTON (614), FORDEN (615), and LLANFYLLIN (616).

* In these cases the limits of the sub-districts only are affected.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

1877	—	—	—	—	—	—	—	—
1878*	16,634,345	117,603	235,206	608,626	508,399	14·2	36·6	30·6

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for subsequent Years has been deduced from the Excess of Births over Deaths registered in each Year. The facts for the five years 1871-5 were not collected owing to the disturbed state of the country; those for the year 1877 and for the years 1879-82 have not yet been finally dealt with. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* Census year.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1872.

* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

The Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1883.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are classified in these Abstracts as bachelors and spinsters.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† 1. The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

BIRTHS and DEATHS registered in the Year 1883—continued.

* The Superintendent Registrars' Districts (630 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2154 in number at the end of the year 1883) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; W indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1883 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

* 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llandfrydog, and Amlwch Sub-districts) and Holyhead (Bryngwran, Llanddausaunt, and Holyhead Sub-districts).

The parishes of Bodewryd and Rhosbeiro, however, situated in Llanddausaunt Sub-district belong to the Union of Anglesey, and not to the Union of Holyhead.

DEATHS IN PUBLIC INSTITUTIONS.

1883.

THE following pages contain the numbers of deaths registered during 1883 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1549 Institutions; of which 726 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 737 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1549 Institutions 55,681 deaths were registered during the year, or 10·6 per cent. of the total deaths in England and Wales, against 10·8 and 10·2 per cent. in the two preceding years; 35,477 occurred in Workhouses, 15,291 in Hospitals, and 4,913 in Lunatic Asylums. The proportion to total deaths was 63·7 per cent. in Workhouses, 27·5 in Hospitals, and 8·8 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1883.

* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

OF the above 11,583 ACCIDENTS, 93 are stated to have occurred to Persons in a state of INTOXICATION, and 4 to Persons suffering from DELIRIUM TREMENS. And in 275 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	195; 4	Barton . . .	Glanford Brigg	425; 3

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-SIXTH ANNUAL
REPORT.

	PAGES
ACCIDENT; Deaths by, largely affected by diversities of occupation	xx
deaths from, at various Ages	211-217
AGES; Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows, 1867-83. (Table C.)	viii-ix
Of 10,000 Marriages the Numbers of Males and of Females married at successive age periods in European countries. (Table D.)	x
Minors married in 1883, and the per-centage to total marriages	xi
at Death	xiii
Death-rates at successive age periods, in 1883	xiii
and Sex-distribution of the English people in 1881, per 1000 persons. (Table Note*.)	xiii
Deaths under one year	xiv
Deaths over 100 years	xiv
at Death, of Males and Females in each year, 1838-83. (Tables 19, 20.)	xlvi-xlix
Mortality of Males and Females at 12 groups of, 1838-83. (Tables 21-23.)	l-lii
Mortality in Counties, at 12 groups of, in 1883. (Table 25.)	liv
of 353,604 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows	26-28
at Death, of Males and Females registered in Divisions, Counties, and Districts	115-136
at Death, of Males and Females from different Causes	137-145
at Death, of Males and Females, in London, from different Causes . .	146-153
ALCOHOLISM; increase of, probably only apparent	xvii
AREA in Acres and Hectares of the United Kingdom and its parts. (Table 50.)	lxxxii
in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 52.)	lxxxiii
in Acres of each Division, County, and District	2-24
in Acres of each District and Sub-district	32-91
ARMY; Strength and Mortality of, in 1883	xxii
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1864-83. (Table 53.)	lxxxiv
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 54.)	lxxxiv
Nationality of, in 1861-71-81. (Table 55.)	lxxxiv
Death-rate at Home and Abroad in each Year, 1861-83. (Table 56.)	lxxxv
Deaths in, in each Year, 1861-83, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 57.)	lxxxv

	PAGES
AURORÆ BOREALES in 1883	xxvii
AUSTRIA; of 10,000 Marriages the Numbers of Males and Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death-rates in each Year, 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-83. (Table 75.)	civ
ATMOSPHERIC PRESSURE in 1883	xxv
BANKERS' CLEARING HOUSE; amount cleared per head of population, 1868- 83. (Table A.)	vi
BAVARIA; of 10,000 Marriages the Numbers of Males and of Females married at successive Age Periods. (Table D.)	x
BELGIUM; of 10,000 Marriages the Numbers of Males and of Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death-rates in each Year, 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-83. (Table 81.)	cvi
BIRTHS in 1883	xii
Sex proportions of	xii
Illegitimate, Proportion to total Births and to Population	xiii
of British Subjects at Sea	xxiii
registered, and excess over Deaths, in each Year, 1838-83. (Table 1.)	xxx
in each Quarter of the Years 1838-83. (Table 12.)	xli
in each Year 1838-83; Legitimate and Illegitimate in 1842 and 1845-83, and Proportion of Males and Females. (Table 13.)	xlii
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1873-83, and the mean of 10 Years, 1873-82. (Table 15.)	xliv
proportion of Males and Females born in Counties in each Year, 1873-83, and the mean of 1873-82. (Table 16.)	xlvi
in the United Kingdom and its parts. (Table 50.)	lxxxii
in the Islands in the British Seas, in each year 1861-83. (Table 52.)	lxxxiii
of British Subjects at Sea in each Year, 1856-83. (Table 59.) . .	lxxxvi
in European countries. (Table 70-84.)	ci-cviii
in Divisions and Counties, distinguishing sex, Legitimate and Illegitimate	30-31
in Divisions, Counties, Districts, and Sub-districts, distinguishing sex, Legitimate and Illegitimate	30-91
excess over Deaths, in Divisions, Counties, Districts, and Sub- districts	30-91
Illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in 1883 the lowest since 1853	xli
disparity in several Counties	xli
Illegitimate, slight decline of	xlii
in each Year, 1838-83, and the mean of 46 Years. (Table 2.) . .	xxxix

	PAGES
BIRTH-RATE—continued.	
means of 46 years 1838–83, and of decennial and quinquennial periods 1838–80. (Table 3.)	xxxii
in each Quarter of the Year 1838–83. (Table 12.)	xli
in each Year, 1838–83, and Legitimate and Illegitimate rates in 1842 and in 1845–83. (Table 18.)	xlii
in Counties in each Year 1873–83, and the mean of 1873–82. (Table 14.)	xliii
in the United Kingdom and its several parts. (Table 51.)	lxxxii
BRAIN DISEASES, increased mortality from, in 1883	xix
(See CAUSES of DEATHS Tables.)	
BRONCHITIS. (See CAUSES of DEATHS Tables.)	
BUILDINGS registered for the Solemnization of Marriages. (Table 11, p. xl.)	xii
BURNS AND SCALDS. (See CAUSES of DEATHS Tables.)	
CANCER, progressive increase of mortality from, since 1851	xviii
Increase amongst Males greater than amongst Females	xviii
(See also CAUSES of DEATHS Tables.)	
CAUSES of DEATH; Registered	xv
Mortality from the various Classes, 1883. (Table G.)	xv
Ill-defined and Non-specified	xxi
Certification of, by Medical Practitioners and Coroners	xxi
further decline of uncertified Causes in 1883	xxi
in the Navy in 1883	xxii
in the twenty-four years 1860–83. (Table 27.)	lvi–lvii
Mortality from, to 1,000,000 persons living in the twenty-four years 1860–83. (Table 28.)	lviii–lix
Mean annual mortality from various causes to 1,000,000 living, in groups of ages, in quinquennials 1858–80, and in 1881–82–83. (Table 29.)	lx–lxi
Mortality from certain, in Counties, in 1883. (Table 34.)	lxvi–lxvii
of Males and Females in 1883; Deaths from each Cause to 1,000,000 living of each Sex. (Table 35.)	lxviii
proportional Number dying from each Cause. (Table 36.)	lxix
of 63 reputed Centenarians in 1883. (Table 47.)	lxxix
in England, at different Periods of Life, Males and Females.	137–145
in London at different Periods of Life of Males and Females.	146–153
in each of the Registration Counties, Males and Females	154–177
and Inquest Cases in Divisions, Counties, and Districts	178–210
Accidental, Suicidal, and Homicidal.	211–223
CENTENARIANS; Deaths of reputed	xiv
Occupations, Ages at, and Causes of Death in 1883. (Table 47.)	lxxix
CERTIFIED PLACES OF WORSHIP; Aggregate Number in 1883; the Number registered; and Certificates cancelled during the Year	xii
CERTIFICATION of the Causes of Death	xxi
CHANGES in the Constitution of Districts in 1883. (Table 69.)	xcix–c
CHICKEN-POX; mortality from, in 1883	xv

	PAGES
CHILDBIRTH; Mortality from, varies much in different industrial localities	xx
Deaths referred to, in each Year, 1847-83. (Table 41.)	lxxiii
Deaths referred to, and Mortality of Mothers per 1,000 Children born alive, in Counties. (Table 42.)	xxiv
Deaths at different Ages of Women after Childbearing, assigned to other Causes than Childbirth or Puerperal Fever. (Table 43.)	lxxv
Deaths from various causes, of Women returned as pregnant. (Table 44.)	lxxvi
CHILDREN; Deaths and Death-rates, of Males and Females in each year 1838-83. (Tables 19-23.)	xlvi-lix
under One Year of Age, Mortality among, in Counties in each Year, 1873-83. (Table 26.)	lv
Mortality of Infants under One Year of Age to 1000 births, in each Year 1838-83. (Table 31.)	lxiii
Ditto in London. (Table 33.)	lxv
CIRCULATORY ORGANS; increase of Mortality from Diseases of	xix
(See CAUSES of DEATHS Tables.)	
COALS; Average price of, in each Year 1852-83, and in each Quarter of 1876-83. (Table 48.)	lxxx
CONSOLS; average price of, 1852-83, and in each Quarter of 1876-83. (Table 48.)	lxxx
CONSTITUTIONAL DISEASES; Deaths from in 1883, and Mortality in 1881-82-83, and mean mortality of, 1871-80. (Table G.)	xv
remarks upon	xviii
CONVULSIONS; deaths from in 1883, the fewest recorded	xix
COW-POX; mortality in 1883	xvi
CROUP. (See CAUSES of DEATHS Tables.)	
DEATHS in 1883	xiii
as affected by the Ages of the Population	xiii
of Infants and of Centenarians	xiv
of each Sex	xiv
In Town and Country	xiv
Registered Causes of	xv
from various classes of Causes in 1883. (Table G.)	xv
from Zymotic or Specific Febrile Diseases	xv
from Parasitic Diseases	xvii
from Dietic Diseases	xvii
from Constitutional Diseases	xviii
from Developmental Diseases	xix
from Local Diseases	xix
from Violence	xx
from Ill-defined and Non-specified Causes	xxi
Certification of Causes of	xxi
in the Army in 1883	xxii
in the Navy in 1883	xxii
of British Subjects at Sea	xxiii
in the Mercantile Marine in 1883	xxiii
registered in each Year 1838-83. (Table 1.)	xxx
of Males to 100 Deaths of Females in each Year, 1838-83. (Table 17.)	xlvi
of Males to 1000 Deaths of Females, in equal Populations of the Sexes, 1838-83. (Table 17.)	xlvi

DEATHS—*continued.*
